BLOMDAHL[®]

medical beauty

Blomdahl medical "no touch" ear piercing, with sterile disposable products

Based on "modern aseptic techniques" which means that all products & methods are designed to prevent the spread of infection associated with piercing. Every piercing is guaranteed to be hygienic & safe for both piercer & client.

A written aftercare instruction is always given to the client to ensure that the wound is taken care of during its healing period, thereby minimizing the risk of infection

Avoid more than just nickel!

Although nickel allergy is the most common contact allergy, jewellery can contain many other allergens, such as cobalt, gold, epoxies & acrylics

Jewellery can also contain toxic, carcinogenic or otherwise unhealthy substances such as lead, cadmium, formaldehyde, phthalates & bisphenol A (BPA). Blomdahl skin friendly jewellery are developed in consultation with skin specialists & are suitable for everyone who wants to avoid contact allergies & other health risks.

Made in Sweden

NOW AVAILABLE IN SOUTH AFRICA

A safe way to look good every day

The notion of "suffering for beauty" or risking your health when wearing jewellery is completely dismantled by Blomdahl.

For decades, Blomdahl has been expertly conducting piercing and manufacturing skin-friendly jewellery that poses absolutely no risk or dangers to your health.

Blomdahl are skincare pioneers in the industry and their continual development has allowed people regardless of age, young or old, to wear skin-friendly jewellery. It allows them to express their personality without the risks associated with piercing and wearing jewellery. Everyone has the opportunity to look and feel beautiful without risking their health.

A sustainable choice for your skin and health

Wearing jewellery containing hazardous substances can cause the development of allergies for anyone and you will only know about it when it is too late. The most common culprit is nickel which can induce a life-long allergy and can happen at any time. This is especially likely for those wearing jewellery in pierced areas such as the ears and nose.

Normal jewellery marked as "nickel-free" is not necessarily free of nickel and can contain other impurities and toxins that can have substantially negative effects on your health.

Blomdahl guarantees jewellery with **zero** hazardous substances that will cause **zero** allergic reactions and pose **zero** health risks. This is especially important in a time when people, from children to the elderly, are getting piercings in much greater numbers, increasing the potential number of people with allergies that cannot wear ordinary jewellery.

Children are at the most risk as the chances of developing a nickel allergy from wearing inappropriate jewellery is much greater at a younger age and this can affect them for life.

Blomdahl presents a fantastic opportunity to provide a huge number of allergy-prone people with a wide array of jewellery that is completely safe to wear all day, every day. It would be the first time they can wear jewellery with zero health problems and they would never need to worry about allergies.

Blomdahl jewellery is not only beautiful but does not compromise on skin friendliness. Each piece is individually made in a completely sterile environment with the kindest materials. This means that your customer will be the very first person to have skin contact with the jewellery piece. A protective tamper-proof label is attached to every piece to make sure it is safe.

Each piece is made of medical plastic or titanium of pure medical quality. Blomdahl has 100% control of the manufacturing and packaging of their jewellery which eliminates any chance of contaminants affecting the jewellery. The skin-friendly coating, be it gold, black or silver, is only applied to the area of the jewellery that has no contact with the skin.

It is time for your customers to experience the wonders of skin-friendly jewellery and be able to express themselves through beautiful pieces that enhance their look and project their personality, rather than deteriorate and compromise their health.

OPENING DEALS

DEAL A: EARS

- 2 Instrument Starter Kit*
- 20 Sterile Cassettes with Piercing Earrings
- Display
- Button Badge
- Certification
- In Salon Training

*Contains 2 instruments, pre-piercing swabs, surgical marker pen, practice dummy earlobe, hair clip, mirror, instruction manual, aftercare instructions, window decal, 1 empty practice cassette, 1 practice non-sterile cassette with one earring & storage box.

- Certification
- In Salon Training

*Contains 1 nose instrument, pre-piercing swabs, surgical marker pen, mirror, operating instructions, aftercare instructions, window decal & 1 empty cassette for practice.

Earrings in pure medical plastic = 0% nickel!

The pure medical plastic is carefully selected to be skin friendly, contains no chemical additives or other contaminants (0% nickel). This makes it a little softer. Blomdahl earrings, made of pure medical plastic, are light, comfortable and, in general, durable. But because the posts, hooks & pendants are soft & they need to be handled carefully.

The first time you put on & take off earrings with posts, you need to be extra careful so as not to bend the pins. Should the earring bend, it is better not to straighten it again. That way it retains its function.

How medical piercing works

Health care is the goal

Adopting the latest, modern, aseptic techniques in the health care industry, Blomdahl's products & piercing methods are safely designed to avoid the spreading of infections during procedures.

Blomdahl piercing uses the most sterile method to provide protection to both the practitioner & the customer. The sterile jewellery is pre-mounted & completely protected in a sterile, disposable cassette within the piercing instrument. For every new piercing, a new cassette is used & the instrument never makes contact with the ear. This means piercing is hygienic & safe for the practitioner & customer.

Easy & safe

The unique piercing technique is completed in two steps. In the first step you aim the piercing jewellery at the marking for the ear piercing & squeeze the cassette together to grip hold of the earlobe. This locks the instrument onto the right area & prevents slippage. The second step is to complete the actual piercing as quickly as possible. Since aiming & squeezing is done at the same time, it is easy & safe.

Fast & gentle

Blomdahl piercing allows for simultaneous piercing for both ears with two instruments to save time & minimize pain. This is especially helpful for children as only one instance of piercing is done & there is no chance of them changing their minds after piercing the first hole. The piercing procedure is the same regardless if one or both ears are done.

Piercing is done faster than a blood test. Each ear-piercing jewellery is pointed, sharp & strong so it is completed swiftly & safely. It ensures the smallest hole possible is made in the ear to avoid chances of infection. Each cassette is well covered & not visible to the customer.

SIMULTANEOUS EARLOBE PIERCING

THE BEST OPTION FOR CHILDREN

A unique advantage to be able to pierce ears simultaneously, all by yourself. The piercing is made simpler & faster. Both child & parent will be pleased about the fact that the child only has to go through one piercing.

Instructional videos on Youtube

For more information & visual instructions on medical ear piercing, please watch our instructional videos on Youtube: "Blomdahl simultaneous earlobe piercing, one practitioner" & "Blomdahl single ear piercing"
