

IMPORTANT:
Disinfectants can damage the polished surfaces of scissors & dull the blades.

Furthermore, the plastic-teflon parts of the screws are affected, which can result in the scissors no longer opening & closing properly. This can also impact the smoothness of operation & cutting performance.

Symmetrical position of the two finger rings delivers a traditional cutting sensation.

The offset position of the two scissor rings relieves tension in the muscles of the arm, neck & shoulders. Cutting becomes comfortable & effortless.

Short, downward-angled thumb handle for ergonomic working posture.

The angled thumb-ring reduces friction & pressure marks & gives secure control of the scissors.

The rotating insert-ring moves with the thumb. Friction & pressure marks are prevented without affecting the sense for the scissors.

High-quality coating prevents direct contact between the skin & the steel for protection in case of nickel allergy.

Guarantees the ideal cutting angle in any position, thereby delivering a precise, straight cut over the entire length of the blade.

V-teeth serration of the thinning teeth provides a smooth, soft feeling during closing. Hair is cut securely & precisely without slippage.

Classic blades with a flat cutting edge angle for excellent sharpness. Micro-serration on one blade avoids slippage of the hair.

Slightly curved thinning teeth fall flush against the lower cutting edge, which is also serrated, for the very highest standards in precision & cutting feel.
